

CRITIWRAP® & PAEDIWRAP® CRITICAL CARE THERMAL TRANSFER WRAPS

Utilising the innovative high protection Mediwrap® textile, Critiwrap and Paediwrap offer a self-contained and independent warming system for the transportation of critically ill and injured patients. Each wrap fully envelops the patient and the built-in hood ensures only the face is exposed.

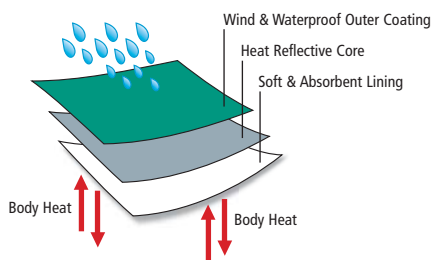

The wraps have been designed to offer full access to any part of the patient very quickly via full length Velcro fastening, which can be easily resealed for maximum heat retention. Critiwrap and Paediwrap provide the critically ill patient with a secure, clean and thermally retentive environment free from contamination and exposure.

- Opens fully to allow easy access.
- Paediatric version available for children up the age of 11.
- Lightweight and compact.
- Provides maximum warmth retention.
- Safe for use with other critical transfer equipment/monitors.
- Minimises cross contamination risk to staff and patients.
- Now available in military olive drab colour.

Critiwrap and Paediwrap are used and recommended by consultants and instructors for ATACC (Anaesthetic, Trauma and Critical Care) and RTACC (Rescue, Trauma and Critical Care) Courses.
