

# FLEXISLIDE® SINGLE USE PATIENT TRANSFER SLIDE SHEET

The Flexislide® is a single-use patient transfer sheet ideal for departments across the hospital, but particularly designed for use in procedural environments such as Operating Theatres, Radiology, Maternity, Endoscopy and Accident and Emergency. As well as assisting in the prevention of cross infection, the Flexislide has been designed to make patient handling both easy and safe, helping prevent back strain and injury.

Flexislide will assist in the practical and comfortable movement of patients with the least possible disruption and will minimise staff risk to exposure of dangerous handling manoeuvres.

Lightweight, individually wrapped and easy to store, the Flexislide is a single use product that helps protect both staff and patients from cross infection. It is extremely strong even in wet conditions.

- Unique material designed to slide easily over most surfaces.
- Facilitates safe & easy transfer of patients.
- Lightweight & individually wrapped.
- Single use, minimising risk of cross-infection.
- Latex free.
- Cost effective.
- Suitable for bariatric patients (ex-wide size also available).

The Flexislide Patient Transfer Slide Sheet is the single-use patient transfer sheet of choice in hospitals across the UK. It has been independently tested in wet and dry conditions and can withstand 415 kg of weight when wet and 424kg of weight when dry. (Copies of test data available).
